

Catwalk Rack

REB Storage Systems International

In a multi-level system, cartons are accessed by hand via intermediate catwalks. With systems up to 100 feet tall, a multi-level system can also incorporate vertical reciprocation conveyors, chutes, and/or pallet drop areas to allow the cartons to be transported from the catwalk levels to the ground.

Multi-level systems utilize pallet rack and store an estimated nine or ten boxes wide x three or four deep x three or four high per shelf. These systems offer high carton capacity and allows for an unlimited number of personnel to be involved in the picking process at all levels, therefore minimal equipment is needed to operate the system.

Integrated Components

- Handrail
- Safety Netting
- Pallet Drop Areas
- FlueKeepers
- Vertical Reciprocating Conveyor
- Stairs
- Chutes
- Kickplates

Typical Plan and Elevation

Minimum service aisle widths can vary by local building authorities, typically 30in or 36in

Egress aisles are 44in

Pallet aisles vary based on customer needs, typically between 60in and 96in

Number of catwalk levels varies, can be up to 5 or 6 levels

Complete Rack System Products and Services

REB Storage Systems International can provide you with products to complete your material handling system, including decking, shelving, and mezzanines.

At REB Storage Systems International, we combine our superior selection of quality products with professional, first-rate service. We will gladly assist you with selecting the right options for your particular needs and can provide additional support to help you complete your project. From rack system engineering to rack installation, we can help with all of the needs of your material handling operations.

We'd appreciate the opportunity to help you further, whether that be more information or a quote.
