

# Rack System Permitting Support

REB Storage Systems International

With our rack system permitting support services, REB Storage Systems International helps you obtain the necessary permits to ensure the on-time implementation of your rack system. We'll help you complete the paperwork, gather the required documentation, and submit your applications to the appropriate authorities.

## Engineered Drawings, High Pile Storage Reports and Structural Calculations

With our rack system permitting support services, our team will research the requirements for the location of your facility including building construction type, sprinklers, zoning, and occupancy classifications. Our engineers will use this data to produce a storage system design that fully meets these regulations.

A licensed project engineer will then prepare and review all drawings, bill of material, and calculation drawings for approval and stamping.

## Support During Permit Approval Process

REB will also manage the application process and swiftly respond to any questions the building department may have during the permit approval process.

## Permit Sign-Off

Once permits have been approved and the installation is completed, REB will arrange for final inspections so that the system can be loaded for operation.

We'd appreciate the opportunity to help you further, whether that be more information or a quote.
